

Category: Flash Diffusers	SKU: AMBDOM	Brand:  GARY FONG
-------------------------------------	-----------------------	--------------------------------------------------------------------------------------------------------------

Description: AMBERDOME

RRP: \$34.95

Quick overview:

AmberDome is made for Lightsphere Universal, Lightsphere Collapsible and Lightsphere Cloud. What is so neat about the ability to "swap tops" is it is so fast to switch. Rather than switching the whole Lightsphere, or having to custom white balance your camera, if you want warm lighting, just put the top on and you're good to go!

Gary says "Here's a great example: With most digital cameras (especially if you are a Canon or Nikon user), you'll notice that in open shade your images are way too cool. But put on this dome (technically it's known as a 1/4 C.T.O filter) and your images will look much more pleasing! YOU'LL SEE THE DIFFERENCE IMMEDIATELY RIGHT ON YOUR LCD SCREEN.

As a professional photographer, I've always have been trying to make my "flash" equipment undetectable. Using the Lightsphere I've made on-camera flash look like a huge, soft light source similar to a studio soft-box. But then the light was daylight balanced, so putting on the Amberdome warms the light up and helps it to blend".
